

MAINTENANCE AND CLEANING

Keeping your dishwasher clean improves its performance, reduces unnecessary repairs, and lengthens its life.

⚠ WARNING

Disconnect the dishwasher from the power supply (unplug or switch off at the circuit breaker) and allow all its parts to cool before any cleaning or maintenance.

External Care

It's best to clean spills on the outside of your dishwasher as they occur. Use a soft, damp cloth on the control panel to gently wipe away spills and dust. Do not use benzene, wax, thinner, chlorine bleach, or alcohol. These materials may discolor the inner walls and cause stains. Do not clean the dishwasher by sprinkling water over it and avoid letting water come into contact with any of the electrical parts.

💡 NOTE:

If your dishwasher has a stainless steel door panel, you can clean it with a stainless steel cleaner for home appliances or a similar product using a clean, soft cloth.

Internal Care

Filtering system

The filtering system in the base of the wash cabinet traps coarse debris from the washing cycle. The collected coarse debris may cause the filters to clog. Check the condition of the filters regularly and clean them if necessary under running water. Follow the steps below to clean the filters.

⚠ CAUTION

- Do not over tighten the filters. Put the filters back in sequence securely, otherwise coarse debris could get into the system and cause a blockage.
- NEVER use the dishwasher without filters in place. Improper replacement of the filter may reduce the performance level of the appliance and damage dishes and utensils.

- 1 Lift up the handles and remove the plate support

- 2 Rotate the Cylinder filter counter-clockwise. Lift the Cylinder filter upwards and out of under the basket.

- 3 Pull forward the Fine filter.

- 4 Tilt the Fine filter and remove it from under the basket.

- 5 Rinse with running water.
For a more thorough clean, use a soft cleaning brush.

- 6 Reinstall the filters in reverse order making sure the Fine filter locks into place.

- 7 Rotate the Cylinder filter clockwise to the close arrow.

Spray arms

If you are in a hard water area, it is necessary to clean the spray arms regularly for hard water chemicals will clog the spray arm jets and bearings.

To clean the spray arms, follow the instructions below:

- 1** One hand raised the basket slightly, and the other hand reached under the basket. Hold the spray arm and lift it up.

- 2** Slightly tilt the arm and remove it from under the basket.

- 3** Wash the arms in soapy and warm water and use a soft brush to clean the jets.

After cleaning, replace it in the opposite direction.

Caring For The Dishwasher

Frost precaution

If you live in a region that is where the inside temperature can drop below zero, care needs to be taken to avoid possible damage if the water in the dishwasher freezes.

1. Turn off the mains power to the dishwasher.
2. Turn off the water supply and disconnect the Water Inlet Hose. Drain the water inside the hose then reconnect.
3. Remove the coarse filters in the tubs and soak up all water possible with a sponge. Then re-assemble.

Cleaning

Only use gentle cleaning products on the exterior of the dishwasher, no solvents or abrasive compounds.

Products specifically for cleaning the stainless steel interior are effective in restoring the original bright interior.

Long term storage

Disconnect the power supply and the water supply.

Remove the coarse filters and soak up all water possible with a sponge.

This reduces the chance of any odors developing inside the tubs.
